DRH: Easy to handle and versatile Cable Dredges

Our Cable dredges (DRH) are successfully used in all those applications where it is necessary to have tools that are manageable and able to work even at great depths.

The small size and modular design allow these dredges to be transported even in remote and difficult to reach locations. Assembly and installation are simple and take only a few hours. These features help to reduce project start-up times and costs.

Our DRH dredges are simple to use: thanks to intuitive controls, they can be managed by a single operator on board.

Available in different versions (with the possibility of hydraulic or electrical power supply), they can be equipped with a wide range of pumps and accessories to perform even in the most difficult situations. The largest model can provide a flow rate of up to 4000 m³/h.

The limited draft and the possibility of rapidly obtaining naval certifications are additional points of strength because they allow DRH to operate in very varied contexts, from artificial ponds to ports, from dams to mining basins.

Main features

- **Easy** to use
- **High productivity**
- Possibility of **working at high depth** with a small hull
- **Maximum flexibility:** each dredge can be equipped with different pump models and numerous accessories
- **Limited draft**
- **Fast delivery times**
- **Speed and cost-effectiveness of transport** thanks to the modular design
- Extremely **fast assembly** and start-up **times**

Main applications

- Cleaning of **canals and rivers**
- Dredging of **ports and marinas**
- Desilting industrial **artificial lakes**
- Dredging of **dam reservoirs**
- Emptying of **mineral tailing ponds**
- Filling of **geotubes**
- Cleaning of **reservoirs** in the food industry
- Removal of **sludge** from industrial or mining processes

Our line of cable dredges is also available in automatic version.

DRH85 | DRH85/160

[hydraulic pump]

electric or diesel power unit

Hydraulic hoist

- Manages the descent and ascent of the pump
- Depth meter

Operator's cabin

- Command and control panel
- Heating and air conditioning
- Ergonomic seat for the operator
- Safety equipment

Power unit

- Soundproof cabin
- Diesel engine or electric motors
- Oil pumps

Winches (x4)

- To move the dredge
- Steel cables up to 210 m
- Possibility of additional propeller for movement

Hull

- Two pontoons 8x1.8x1.25 m with central hull
- Low draft

DRH DIMENSIONS SET UP

Length	8 m
Width	6 m
Height	5 m
Weight	30 ton

TRANSPORT

Transportable in 4 containers 40'.

MODULAR DESIGN

Dimensions	Two pontoons 8x1,8x1,25 m with central hull.
Draft	60 cm

RANGE OF DREDGING PUMPS

HY85	MAX FLOW RATE [m ³ /h]: 500 MAX PUMPING DISTANCE [m]: 800 DISCHARGE DIAMETER: DN150 MAX SOLID PASSAGE: 60 mm
HY85HC	MAX FLOW RATE [m ³ /h]: 1000 MAX PUMPING DISTANCE [m]: 500 DISCHARGE DIAMETER: DN250 MAX SOLID PASSAGE: 90 mm
HY85/160	MAX FLOW RATE [m ³ /h]: 600 MAX PUMPING DISTANCE [m]: 1500 DISCHARGE DIAMETER: DN250 MAX SOLID PASSAGE: 60 mm
HY85/160HC	MAX FLOW RATE [m ³ /h]: 1000 MAX PUMPING DISTANCE [m]: 700 DISCHARGE DIAMETER: DN250 MAX SOLID PASSAGE: 90 mm

Performance will depend on the actual site conditions and duty point.

ACCESSORIES

Excavators

- Motor power: 14.5 kW
- Replaceable teeth
- Hydraulic motor with radial pistons
- Oil flow rate: 35 l/min each
- Weight : 500 kg
- Speed: 50 r.p.m.
- Torque: 2.6 kNm
- Rotation in both directions

Integrated jet ring system

- Thanks to the high-pressure water jets, it allows to disintegrate the material and have a higher concentration of solids in the mixture
- Flow rate: 60-200 m³/h
- Pressure: 6-7 bar
- Power supply: high pressure horizontal pump

Propeller

- To move and rotate the dredge
- Hydraulic driven
- Maneuverable from the cabin

Dragflow monitoring system

Dragflow has developed a monitoring system for the full range of dredges that allows operators and project managers to keep track of key indicators of a project such as placement, area coverage, and more. The information is collected by a series of sensors on board and saved on a cloud-based system accessible to operators on the dredges and offsite project managers. This telemetry package also allows remote diagnosis and downtime prevention that greatly increases efficiency of the overall dredging operation.

The Dragflow monitoring system is customized for each application and can include following accessories:

Positioning and Bathymetry

- **GPS System:** precise mapping and positioning within the dredging area for effective coverage and better planning. The system can be combined with sensors such as Encoder pulley, flow meter, densimeter and more for data crossing.
- **Echosounder:** the serial interface can connect to the GPS system via RS232 communication, and elaborate georeferenced maps, useful to make the work more easy and accurate.

Work parameters

- **Flowmeter:** the electromagnetic flow meter provides flow measurements in real time for the operator. In combination with the densimeter, it is possible to quantify the volume of material actually removed.
- **Density meter:** provides real-time density measurements in the discharge pipe for all types of solids. The meter uses ultrasonic technology to measure density and it is specifically designed for dredging and mineral applications.

Working depth meter

In order to determine the location of the dredging pump during operations, depending on the application Dragflow dredges can be equipped with encoder pulleys or piezoresistive transducers to provide real-time information to the operator.
